

FACELIFT

The *Xtra* line represents a giant step forward in SIMILDIET's™ dermocosmetic development.

Fusing our traditional active ingredients and biomimetic peptides places us at the forefront of even the most advanced cosmeceutical companies.

By using biomimetic peptides we are acting on the innermost mechanisms of cell physiology.

Biomimetic peptides interact as biocatalyzers, they participate in or inhibit inter-cell communication, activate metabolic processes and produce an overall biostimulation of the skin.

They are structurally identical to those found in human skin which means they can intervene in physiological mechanisms with a highly specific overall action.

Box contains 3 vials x 5 ml.

SODIUM HYALURONATE (HYALURONIC ACID)

Its function is to maintain the optimum level of tissues moisturising and thus avoid the elasticity loss in favour to the new collagen and elastin production.

HYDROSOLUBLE COLLAGEN

Collagen is a fundamental structural protein element of the skin that makes this smoother, firmer and stronger, as well as greatly increasing volume.

3 BIOMIMETIC PEPTIDES

Hexapeptide-8 (Argireline®):

This peptide is patterned from the neuromuscular N-terminal that efficiently blocks the release of neurotransmitters thus reducing muscle contraction.

Hexapeptide-30:

This acts on the agrin/MuSK postsynaptic pathway as a competitive antagonist of the muscle-specific kinase at the agrin binding site, helping reduce muscle contraction and thus lessening the formation of wrinkles.

Pentapeptide-18:

This indirectly blocks the calcium channels inhibiting the release of acetylcholine, thus reducing neuron excitability and decreasing muscle contraction. This has an extraordinary synergistic effect when combined with Hexapeptide-8.

THERAPEUTIC INDICATIONS

Specific treatment for wrinkles in the glabellar area, around the eyes and on the forehead.

TREATED AREAS

Glabellar and forehead wrinkles.

Preriorbital wrinkles.

INSTRUCTIONS FOR USE

Each specialist will recommend the best technique to correctly apply the product.

Xtra FACELIFT SIMILDIET™, reduces facial expression wrinkles produced by the constant repetition of movements caused by muscle contraction of facial expression. It has a global anti-ageing effect, moisturizing and precursor of the collagen synthesis, elastin and proteoglycans.

Xtra ANTIAGING GLOBAL TREATMENT

Xtra FACELIFT SIMILDIET™, complements perfectly our *Xtra* FACE ANTIAGING SIMILDIET™: a cocktail specifically designed to provide the skin (face and neck) all its natural physiological components. In fact, these components have biomimetic peptides inductors of the synthesis lacking molecules (collagen, elastin, proteoglycans).

Specially indicated because of its global anti-ageing effect: bio-revitalising and complete skin nutrition, reducing wrinkles, expression lines and skin pores, increasing its luminosity, improves its texture, quality and reduces its roughness. It provides a smoother and younger skin effect. Immediate lifting effect (D.M.A.E.).

We complete the anti-aging treatment with daily use at home (night and day) of **FACE ANTIAGING cream**.

Lifting effect (D.M.A.E.), redensifyer (hyaluronic acid), moisturising and antioxidant. It provides a natural moisturizing factor and stimulates structural protein synthesis, collagen and elastin.

Storage Conditions:

Store between 2°C and 25°C. Avoid leaving the product on the floor, close to a source of heat or humidity or exposed to direct sunlight.
